I have a sheet that contains many formulas. But they do not recalculate automatically when I change input. I'm looking for a hotkey, that can re-calculate the sheet. According to this page, F9 calculates all sheets in all open workbooks, and Shift + F9 calculates the active sheet. Neither works for me. I know a tip: delete any row to refresh sheet.

This Excel file combines arc flash equations from a proposal to NFPA 70E-2003 with simplified equations to calculate available fault current. This tool uses methods that have been shown to result in conservative estimates of fault current, which should result in conservative estimates of arc incident energy if appropriate arc fault clearing times are used .
