Hidden Markov Model (HMM) is a statistical Markov model in which the system being modeled is assumed to be a Markov process with unobservable (i.e. hidden) states.. The hidden Markov model can be represented as the simplest dynamic Bayesian network. The mathematics behind the HMM were developed by L. E. Baum and coworkers. HMM is closely related to earlier work on the optimal nonlinear ...

In this tutorial I'll be discussing how to use Markov Random Fields and Loopy Belief Propagation to solve for the stereo problem. I picked stereo vision because it seemed like a good example to begin with, but the technique is general and can be adapted to other vision problems easily.

Das Hidden Markov Model, kurz HMM (deutsch verborgenes Markowmodell) ist ein stochastisches Modell, in dem ein System durch eine Markowkette - benannt nach dem russischen Mathematiker A. A. Markow - mit unbeobachteten Zuständen modelliert wird. Ein HMM kann dadurch als einfachster Spezialfall eines dynamischen bayesschen Netzes angesehen werden.. Die Modellierung als Markowkette bedeutet ...

The Lempel-Ziv-Markov chain algorithm (LZMA) is an algorithm used to perform lossless data compression. It has been under development since either 1996 or 1998 by Igor Pavlov and was first used in the 7z format of the 7-Zip archiver. This algorithm uses a dictionary compression scheme somewhat similar to the LZ77 algorithm published by Abraham Lempel and Jacob Ziv in 1977 and features a ...

This is just convention. In fact, even the name main(), and the arguments passed in are purely convention. When you run java.exe (or javaw.exe on Windows), what is really happening is a couple of Java Native Interface (JNI) calls.

Last update: 10th May 2013. Fixed a mistake in handling reflection case. Finding the optimal/best rotation and translation between two sets of corresponding 3D point data, so that they are aligned/registered, is a common problem I come across. An illustration of the problem is shown below for the simplest case of 3 corresponding points (the minimum required points to solve).
