Secret sharing (also called secret splitting) refers to methods for distributing a secret amongst a group of participants, each of whom is allocated a share of the secret. The secret can be reconstructed only when a sufficient number, of possibly different types, of shares are combined together; individual shares are of no use on their own.

A Bulge or a Volcanic Plug? There are two theories about how Devils Tower formed. One theory
holds that Devils Tower is a laccolith. A laccolith is a large mass of igneous (volcanic) rock that intruded through sedimentary rock beds but did not actually reach the surface, producing a rounded bulge within the sedimentary layers.

**Devil’s Tower National Monument | Answers in Genesis**
A confidence level is an expression of how confident a researcher can be of the data obtained from a sample. Confidence levels are expressed as a percentage and indicate how frequently that percentage of the target population would give an answer that lies within the confidence interval.
